Behavioral ecologists focusing on individual differences in behavioral expression seek to quantify sources of variation in behaviors and to study the ecological and evolutionary causes and consequences of such variation [3, 4, 70, 73,74,75]. There are three principal ways in which behavior can vary among individuals. Individual variation in average behavior over repeated observations ...

Most studies to date examining behavioral and life history covariation have largely focused on individuals or populations of a single species [6, 9, 83], therefore our pioneer study provides further insight for the association between behavior and POL, exemplified by inter-specific behavioral variation in accordance with a fast-slow continuum. In a novel microenvironment, the smaller ...

Study of behavioral variation concerns with the behaviors displayed by individuals and how these behaviors vary among individuals both within and among populations. Animals have evolved specific contextual behaviors, such as defense, reproduction, and exploration. Variations in these behaviors have fundamental implications on an individual's ability to acquire, process, and respond to novel information or stimuli. These differences in behaviors can result from differences in life history ...

Case Study on Emotional and Behavioral Disorders. Bobby is an eighth-grade student who has exhibited emotional and/or behavioral disorder characteristics since he was four years old. Once his mother noticed he was aggressive toward his younger sister, as well as hurting animals, she had him screened by the school district. Even though Bobby was placed in an at-risk preschool program, his ...

Multiple methods have been developed to infer behavioral states from animal movement data, but rarely has their accuracy been assessed from independent evidence, especially for location data sampled with high temporal resolution. Here we evaluate the performance of behavioral segmentation methods using acoustic recordings that monitor prey capture attempts.

The child assessment that lies at the center of this child behavior case study, indicated that Jason did better at home, because, as an only child, he received his mother's undivided attention and support. She also coddled him and did everything for him. She had not yet encouraged him to meet age appropriate expectations and responsibilities. He was used to being the center of attention and having everything done for him.

What is Behavioural Variation? Definition of Behavioural Variation: Modularised definition of new, modified and removed behaviour, by means of the underlying programming model's constructs, such as procedures or classes. A variation is therefore expressed as a group of partial definitions, with complete definitions being a particular case.

Variation in the COMT gene has been implicated in a number of psychiatric disorders, including psychotic, affective and anxiety disorders. The majority of these studies have focused on the functional Val108/158Met polymorphism and yielded conflicting results, with limited studies examining the relationship between other polymorphisms, or haplotypes, and psychiatric illness. We hypothesized that COMT variation may confer a general risk for psychiatric disorders and have genotyped ...
