An electromagnetic field is a classical field produced by moving electric charges. It is the field described by classical electrodynamics and is the classical counterpart to the quantized electromagnetic field tensor in quantum electrodynamics. The electromagnetic field propagates at the speed of light and interacts with charges and currents. Its quantum counterpart is one of the four fundamental forces of nature The field can be viewed as the combination of an electric field and a magnetic field

We are seeing a rise in TV shows and TV watchers as technology improves. When you watch TV, you're being exposed to damaging electric and magnetic fields radiations from the television's electromagnetic field. Most TVs produce an electromagnetic field for up to twelve feet in all dimensions. This is common in LCD, LED, and plasma TV.

The effects of electromagnetic fields on the human body depend not only on their field level but on their frequency and energy. Our electricity power supply and all appliances using electricity are the main sources of ELF fields; computer screens, anti-theft devices and security systems are the main sources of IF fields; and radio, television, radar and cellular telephone antennas, and ...

### **Electromagnetic Fields T V S Arun Murthy**

Electromagnetic fields (EMF) of all frequencies represent one of the most common and fastest growing environmental influences, about which anxiety and speculation are spreading. All populations are now exposed to varying degrees of EMF, and the levels will continue to increase as technology advances.

### **Electromagnetic fields - World Health Organization**

The electromagnetic force comes from something called an electromagnetic field. In physics, a field is how we keep track of things that might change in space and time. It is like a set of labels for every point in space. For instance, the air temperature in a room could be described by a field, where the labels are just numbers saying how hot it is at that point in the room. We could have more ...
