Continuous annealing can provide products for the automotive and appliance industries which exhibit more uniform mechanical properties, better shape (flatness), and cleaner surfaces than batch annealing. Continuous annealing (CA) is especially suited for the high-strength steel grades required by the automotive industry. Because of the rapid heating cycle encountered in continuous annealing ...

Although continuous-sheet-annealing facilities have been used in the North American steel industry for several decades, their use has been largely restricted to certain products for which special metallurgical processing is required. These continuous-annealing (CA) facilities have not been competitive with batch annealing (BA) in producing the highly ductile and formable carbon-steel sheets required by the automotive and appliance industries. However, new technology has been developed over ...
