In this course you will learn to recognise the diversity of marine zooplankton taxa; the factors that regulate their distribution and abundance, both now and in the future; and the fundamental role they play in marine ecosystem function. There are 5 broad themes: 1) Biodiversity and taxonomy; 2) Temporal and spatial distributions; 3) Sampling methods and monitoring programmes; 4) Trophic ecology and biogeochemical cycling; and 5) Climate change.

Zooplankton dominate the abundance and biomass of multicellular animals in pelagic marine environments; however, traditional methods to characterize zooplankton communities are invasive and laborious. This study compares zooplankton taxonomic composition revealed through metabarcoding of the cytochrome oxidase I (COI) and 18S rRNA genes to traditional morphological identification by microscopy. Triplicates of three different sample types were collected from three coral reef sites in the ...
