Geochemical exploration for petroleum is the search for chemically identifiable surface or near-surface occurrences of hydrocarbons and their alteration products, which serve as clues to the location of undiscovered oil and gas accumulations. Surface geochemical principles

Surficial geochemical exploration principles - AAPG Wiki

Geochemical prospecting is conducted by the systematic determination of the contents of chemical elements within a region under study by taking samples in a specific prospecting grid for subsequent analysis of their composition. The content of chemical elements of the desired mineral—the principal valuable components of the deposit or their accessory minerals—is determined in the test samples. There are more advanced geochemical prospecting methods, such as aerial and motor-vehicle ...

In general, the fundamental principle involves testing naturally occurring sample media for enrichment in certain elements, and tracing those elements back to their source An Overview of Geochemical Methods Page 2 October 30th2013 Figure 2:Dispersion of metals from sulphide deposits by groundwater and streams into lakes and lake sediments.

AN OVERVIEW OF GEOCHEMICAL METHODS

In geochemical prospecting the search for anomalies is based on the systematic measurement of trace elements or chemically influenced properties. Samples of soils, lake sediments and water, glacial deposits, rocks, vegetation and humus, animal tissues, microorganisms, gases and air, and particulates are collected and tested so...
