The Diaporthales in North America : with emphasis on ...

The Diaporthales are a distinct order within the Sordariomycetes, the class including ascomycetous fungi that produce asci primarily in perithecial fruiting bodies (Zhang and Blackwell 2001, Zhang et al 2006). The Diaporthales include fungi having perithecia either solitary or aggregated in a stroma, often with long necks, uniloculate asci that float free

The Diaporthales in North America, with emphasis on ...

Demarcation of family, genus and species boundaries in the Diaporthales has been

tentative due to uninformative illustrations and descriptions, overlapping morphological characteristics, misplacement or poor condition of type specimens and shortage of molecular data from ex-type cultures. In this study, we obtained the type specimens or other authentic specimens of diaporthalean taxa from worldwide fungaria. We examined, described and illustrated them. This study is based on ...
